

Drive Through Road Weighbridge

Type 4300/6300

Technical Description

Structure

Main load bearing members are heavy duty universal beams.

Cross members are rolled steel column spaced at 500mm. The centres are fully welded for maximum strength and rigidity.

Loadcells are mounted on the outer of the side beams for easy access and protection from water and spills.

Finish

Structure is fabricated from a high grade blasted material. After fabrication the structure is primed and two coats of gloss finish applied.
